

Z-PAK® SERIES

High Efficiency Rigid Cell

> FEATURES

Glasfloss Z-Pak air filters are designed for medium and high efficiency applications and offer superior service life. The Z-Pak's total rigid construction makes it ideal for variable air volume systems (VAV), where changes in air flow can have an adverse affect on non-rigid type filters. Z-Pak filters are available with fiberglass or synthetic media in four efficiency performance levels: 40-45%, 60-65%, 80-85% and 90-95%. The Z-Pak is available in a variety of filter face dimensions with two optional depths.

> CONSTRUCTION

The key to the Z-Pak's performance capability is its design. The design is built around controlled filter media spacing, which ensures maximum air flow with minimal resistance factors. The heart of any filter product is the media. The filter media is a high density, microfine glass fiber or synthetic fiber, which consistently provide high performance ratings. The media is supported by heavy-duty, metal backing to aid in maintaining its rigid configuration. Controlled filter media spacing is achieved through the use of flame retardant, plastic media separators. The outer filter enclosure is bonded to the media pack and made of heavy gauge, galvanized steel to further enhance the filter integrity. To ensure maximum rigidity and prevent any possible media pack shifting under high velocity conditions, diagonal, galvanized steel reinforcing struts are attached to the filter frame. Spring clip holes (box style) for pre-filter attachment.

> APPLICATIONS

Z-Pak high efficiency air filters are used in a variety of commercial and industrial applications including: schools, commercial buildings, hospitals, arenas, manufacturing plants, micro electronic component assembly and food processing. The filter header option lets the Z-Pak fit into any existing installation without modification. Z-Pak filters can be interchanged or adapted to any existing filter system.

> SPECIFICATIONS

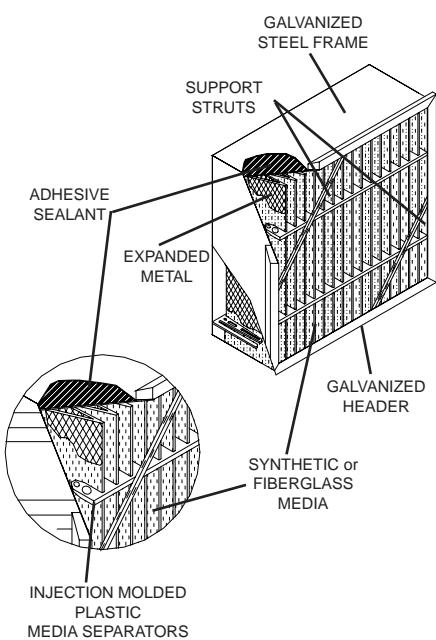

The Glasfloss Z-Pak Series frame shall be a rigid construction of 26 gauge galvanized steel. A heavy gauge, galvanized steel header is optional for the Z-Pak Series. The media shall be a high density synthetic fiber or a microfine glass fiber. The filter media pack shall be constructed by pleating a continuous sheet of media into uniform spaced pleats, which are separated by flame retardant, injection molded plastic media separators. A heavy-duty expanded metal reinforcement shall be laminated to the air exit side of the media by a thermo-setting adhesive to maintain continuity of the radial pleats. The expanded metal shall be galvanized to resist rust and corrosion. Metal vertical brackets shall be utilized to stabilize the media pack and prevent air bypass. The air entry and air exit side shall be fitted with two 26 gauge support struts. The pleated media ends are adhered to the top and bottom of the metal frame with an adhesive sealant to prevent air bypass. Gasket material, 3/4" in width and 1/4" in thickness, is optional. Glasfloss Z-Pak series filters shall be rated to withstand temperatures up to 180 degrees Fahrenheit. Glasfloss Z-Pak filters shall be rated Class 2 under U.L. std. 900.
